Island Peak Climbing Difficulty

Climbing Island Peak (Imja Tse) is a challenging, but if you are physically fit, we can get you to the summit. If you've already hiked to altitude, then this is a fantastic next challenge. The first part of the ascent is physically demanding because you are trekking up rough terrain at over 5000m.

This part is definitely non-technical. You'll then reach at the glacier field, where you'll need to rope up and put on crampons. There is a risk of falling into snow-covered crevasses along this section.

To cross, these will have ladders strapped in place. This can be challenging, but you will always be on safety lines. Finally, you reach at the foot of the headwall. This is the most difficult part of the climb because the ascent is steep and the air is at its thinnest.

Fixed lines makes the climbing route easier and safer, but reaching the summit ridge will require a lot of determination. The ascent from the summit ridge to the top is a short and relatively easy.
