Mera Peak Climbing Overview

Mera Peak stands 6654 meters high and is considered one of the major, most popular trekking peaks in Nepal. It lies in the [Khumbu Himalayan Range](#). The **Mera Peak Climbing** trail winds amongst forests of pine and rhododendrons in this remote and uninhabited valley leading to the alpine Environment of Mera Base Camp.

The Peak itself rises to the south of [Everest](#). The ascent of the peak is technically straightforward, however heavy snow and maze of crevasses can make our journey a longer way to summit.

Besides the charm of Mera Peak climbing, the trek to base camp from Lukla is rewarding to experience rare unspoiled regions of Nepal with densely forested hillsides.

We believe the effort is definitely worth it! The trek starts with a lovely route to the Arun Valley which takes you away from all the crowds on the [Everest trek](#). You will see local villages farming the terraces in this area of the trek, as they have done for decades.

How Hard is it to Climb Mera Peak?

If you have already climbed Kilimanjaro or trekked to [Everest base camp](#), Mera Peak climbing is a likely next challenge.

The Nepal Mountaineering Association identifies it as a trekking mountain. However their criteria for this is only that to reach the summit you need to be able to use crampons and ice axes.

This may give the impression that it's not difficult for Mera Peak. It's not true, it is the highest trekking peak in Nepal at 6476 m, and this brings with it all the difficulties of trekking at high altitude. These include the risk of extreme weather and altitude sickness, of course.

Besides the altitude, the Mera Peak is also a really hard slog. There's no particular point that's particularly challenging, but the top night climb of the glacier is just going on. Allow 5-6 hours to walk to the edge of the glacier!

But all that effort is worth it for the views out of this world.

Itinerary
